Humans Take 20,000 Breaths Per Day

Daily Pure Oxygen Intake
2,000 gallons or 7,570 litres

Daily Pure Oxygen Consumption
379 gallons or 1,000 litres

■ N₂ ■ CO₂, rare gases ■ O₂

Composition of the atmosphere

Note: based on average 170lb adult

Oxygen Intake Capacity Decreases with Age

Declining at 2% per year for men and 2.5% per year for women

Note: Data from research trials by hemnassen (1973)

Prevalence of hypoxia in functional tissue

The Hidden Threat of Oxygen Deficiency

- **Lack of oxygen in the brain - the “silent killer” of memory**

Headache and dizziness, insomnia and forgetfulness, slow reaction time, risk of brain atrophy

- **Cardiac hypoxia - a cardiovascular “warning sign”**

Chest tightness and palpitations, arrhythmia, fatigue and tiredness, angina pectoris

- **Cellular hypoxia - the “hidden driver” of chronic disease**

Hypoxia-inflammation vicious cycle, joint pain, blurred vision, arteriosclerosis

- **Lung hypoxia - the “invisible shackle” of respiration**

Shortness of breath and shortness of breath, nocturnal apnea, risk of COPD

- **Skin Oxygen Deficiency - The “Accelerator” of Aging**

Dullness and dryness, wrinkles, age spots, slow wound healing

Oxygen is the source of life.
It's the cornerstone of life on Earth.
It's an indispensable element to sustain human life.

Nobel Prize Lack of oxygen is an important factor in many diseases

2019 Nobel Prize in Physiology or Medicine revealed: Cells are sensitive to the amount of oxygen in their environment, and under hypoxic conditions there is an increase in a molecule called hypoxia-inducible factor (HIF), which leads to changes in the expression of more than 300 genes, causing the cells to shift to a metabolic pattern that is completely different from that of an oxygen-rich state.

Chronic oxygen deprivation will lead to accelerated aging of the body and increased risk of disease.

—American Association for the Advancement of Science (AAAS) Science

What Is Hyperbaric Oxygen, & How Is It Used?

Hyperbaric oxygen therapy (HBOT) delivers concentrated oxygen inside a sealed chamber pressurized above normal atmospheric levels (typically 1.3–2.0 ATA for mild chambers).

At increased pressure, oxygen dissolves more readily into blood plasma, allowing greater oxygen transport beyond red blood cells.

This elevated oxygen delivery reaches tissues where circulation may be limited or impaired.

Enhanced oxygenation supports cellular repair, reduces oxidative stress, and aids the body's natural recovery processes.

Chambers are utilized in wellness facilities, rehabilitation centers, athletic performance programs, and increasingly in private homes for personal health routines.

HBOT increases the partial pressure of oxygen and enhances the end-to-end arrival of oxygen in the blood vessels.

**Oxygen content at normal
atmospheric pressure**

**Oxygen content at higher
atmospheric pressure**

OxyEdge Core Advantages

High Tech Instruments
and Multiple
Safety Measures

First-class luxury
configuration and
large oxygen therapy space

USA Oxygen Booster
System 96% with High
Purity Oxygen Generation

Eight levels of
safety, security,
and air filtration

Made with eco-friendly, E0-
grade materials that meet
the highest national
safety standards

Large air volume ventilation
system to keep the
air fresh at all times

Ultra-high-strength cabin
for superior safety
and durability

Ultra-quiet technology.
45 decibels
in the cabin.

OxyEdge

Where Precision Meets Personalization

The OxyEdge Ascend Series

CREST

Capacity: 1 - 2 People **Cabin**
Size: 7' L × 3.6' W × 6' H
Cabin Pressure: 1.3 - 2.0 ATA
Maximum Power: 2050W
(main engine + air conditioner)

ELEVATE

Capacity: 2 - 4 People
Cabin Size: 7' L × 6.6' W × 6.1' H
Cabin Pressure: 1.3- 2.0 ATA
Maximum Power: 2350W
(main engine + air conditioner)

SUMMIT

Capacity: 4 - 6 People **Cabin**
Size: 7' L × 11' W × 6.6' H
Cabin Pressure: 1.3 - 1.5 ATA
Maximum Power: 3600W
(main engine + air conditioner)

The OxyEdge Pinnacle Series

HORIZON

Capacity: 1 - 2 People

Cabin Size: 6.75' L × 3.3' W × 6.2' H

Cabin Pressure: 1.3 - 2.0 ATA

Maximum Power: 2050W
(main engine + air conditioner)

EXPEDITION

Capacity: 2 - 4 People

Cabin Size: 6.6' L × 5.5' W × 6.4' H

Cabin Pressure: 1.3 - 2.0 ATA

Maximum Power: 2350W
(main engine + air conditioner)

ODYSSEY

Capacity: 4 - 6 People

Cabin Size: 11' L × 7' W × 6.6' H

Cabin Pressure: 1.3 - 1.5 ATA

Maximum Power: 3600W
(main engine + air conditioner)
